International application No. PCT/GB2004/004432

| Box II Observations where certain claims were found unsearchable (Continuation of Item 2 of first sheet) |
|---|
| This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: |
| Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely: |
| Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically: |
| 3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). |
| Box III Observations where unity of invention is lacking (Continuation of Item 3 of first sheet) |
| This International Searching Authority found multiple inventions in this international application, as follows: |
| see additional sheet |
| As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims. |
| 2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. |
| 3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.: |
| No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 4-26 (completely); 1-3, 41, 54-56 (partially) |
| Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees. |

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-3 (partially), 4-26 (completely), 41 (partially), 54 to 56 (partially)

> A method of sequencing a target polynucleotide comprising the steps of:

(a) carrying out template derived nucleotide synthesis utilising a labelled nucleotide;

(b) detecting the presence or absence of said labelled nucleotide

(c) replacing said labelled nucleotide with an unlabelled nucleotide: and

(d) repeating steps a) to c)

2. claims: 1-3 (partially),27-40, 42-47 (completely), 41 (partially)

> A method of sequencing a target polynucleotide comprising the steps of:

(a) carrying out template derived nucleotide synthesis by ligating a labelled oligonucleotide to a primer annealed to said target polynucleotide;

(b) detecting the presence or absence of said labelled oligonucleotide

(c) replacing said labelled oligonucleotide with an unlabelled oligonucleotide; and

(d) repeating steps a) to c)

3. claims: 48,49 (completely)

Method of comparing two or more polynucleotide sequences.

4. claim: 50 (completely)

Method of resolving ambiguities in a polynucleotide sequence.

5. claims: 51, 52 (completely)

Method of sequencing mRNA.

6. claim: 53

A method of sequencing a target polynucleotide comprising the steps of:

(a) treating said target nucleotide with an intercalating

dye; (b) extending a primer annealed to said target polynucleotide utilising a nucleotide labelled with a label which acts as a FRET partner to said DNA intercalalting dye; (c) detecting the presence or absence of said nucleotide by

means of an imaging technique that utilises FRET; and (d) repeating steps a-c; wherein steps (a) and (b) can occur in any order.

claim: 57 (completely)

A method of sequencing a target polynucleotide comprising

the steps of:

(a) carrying out template derived nucleotide synthesis utilising a nucleotide labelled with a FRET partner and at least one other polymerisation reaction component labelled with a FRET partner;

(b) determining the nucleotide incorporated by detecting

FRET interactions; and

(c) repeating steps (a) and (b).
